

INTERNSHIP PROJECT REPORT

Google Play Store Data Analytics Using Python

Submitted By: Prerna Laxane

Internship Platform: Elevance Skills

Domain: Data Analyst

Tools Used: Python, Pandas, Plotly, Jupyter Notebook

Dataset Used: Google Play Store Dataset & Google Play Store User Reviews Dataset

Project Duration: 2-Month Internship Program

Submission Date: 27 May 2026

1. Introduction

This internship project focused on data analysis and visualization using Python and Jupyter Notebook. The project was based on the Google Play Store dataset and User Reviews Dataset and involved performing data cleaning, transformation, filtering, and analytical operations. Different tasks were completed to understand app performance, user engagement, and category-based insights. Interactive visualizations were also created using Plotly to represent meaningful findings. This project provided practical exposure to handling real-world datasets and applying analytical techniques for decision-making.

The project also enhanced problem-solving and technical skills through real-time task execution and data interpretation. By working on multiple analytical tasks, valuable insights were generated regarding app categories, ratings, installs, and user sentiments. The internship experience strengthened practical understanding of data analysis workflows and improved confidence in using Python libraries for exploratory analysis and visualization.

2. Background

The Google Play Store contains a large collection of mobile applications across multiple categories, serving millions of users worldwide. Analyzing app data helps understand trends related to ratings, installs, reviews, and user feedback. User reviews further provide valuable sentiment information that helps evaluate customer satisfaction and app performance. This project used Google Play Store and User Reviews datasets to explore patterns and derive meaningful insights using Python-based analytical techniques.

3. Learning Objectives

The primary objective of this internship project was to develop practical knowledge of data analysis using Python and real-world datasets. The project aimed to improve skills in data cleaning, preprocessing, filtering, and visualization using libraries such as Pandas and Plotly. Another important objective was to understand User Behavior and app performance through analytical techniques and sentiment analysis. The internship also focused on strengthening problem-solving abilities, logical thinking, and the ability to transform raw data into meaningful insights for decision-making. Through this project, practical experience was gained in handling datasets and presenting analytical findings effectively.

4. Activities and Tasks

During this internship, analytical tasks were performed using the Google Play Store and User Reviews datasets. The work included data cleaning, preprocessing, filtering, and visualization using Python libraries such as Pandas and Plotly. Different conditions and analytical techniques were applied to study app performance, user engagement, installs, ratings, and sentiment patterns.

The key tasks completed during the internship included:

Task 1: Dataset cleaning and preprocessing.

Task 2: Filtering and category-based analysis.

Task 3: Sentiment and multilingual category analysis.

Task 4: Creation of interactive visualizations and bubble charts.

Task 5: Rating, installs, and review-based analytical comparisons.

Task 6: Final analysis and interpretation of application trends and insights.

5. Skills and Competencies Developed

During this internship, several technical and analytical skills were developed and improved. Practical experience was gained in Python programming, data cleaning, preprocessing, and visualization. Knowledge of Pandas and Plotly libraries was strengthened through real-time analytical tasks. The internship also improved logical thinking, problem-solving ability, data interpretation, and understanding of sentiment analysis. In addition, communication, documentation, and project management skills were enhanced while completing and organizing the assigned tasks.

6. Challenges and Solutions

During the internship, several challenges were faced while working with the datasets and analytical tasks. Some data columns contained missing or inconsistent values, which required cleaning and preprocessing. Errors related to data types, filtering conditions, and visualization settings were also encountered during task implementation. These challenges were addressed through debugging, logical problem-solving, and repeated testing of the code. By resolving these issues, a better understanding of Python programming and data analysis techniques was developed.

7. Outcomes and Impact

The internship project provided practical exposure to real-world data analysis and visualization. Through the successful completion of analytical tasks, meaningful insights were generated from the Google Play Store and User Reviews datasets. The project improved technical understanding of Python-based analytics and strengthened confidence in handling datasets independently. The experience also contributed to better analytical thinking and helped develop a structured approach toward solving data-related problems.

8. Conclusion

The internship project was a valuable learning experience that combined theoretical knowledge with practical implementation. By working on Google Play Store and User Reviews datasets, important analytical and technical skills were developed using Python and visualization tools. The successful completion of assigned tasks improved confidence in data analysis, problem-solving, and project execution. Overall, this internship contributed significantly to professional and technical growth and provided hands-on experience in real-world data analytics.

9. Feedback and Evidence

The internship tasks were completed using Python and Jupyter Notebook with the Google Play Store and User Reviews datasets. Interactive visualizations and analytical outputs were generated successfully as evidence of task completion. Selected screenshots of graphs and analytical results are included below to demonstrate the work performed during the internship.
